Paragraph Structure

Most paragraphs in an essay have a three-part structure—introduction, body, and conclusion. You can see this structure in paragraphs whether they are narrating, describing, comparing, contrasting, or analyzing information. Each part of the paragraph plays an important role in communicating your meaning to your reader.

- **Introduction:** the first section of a paragraph; should include the topic sentence and any other sentences at the beginning of the paragraph that give background information or provide a transition.
- **Body:** follows the introduction; discusses the controlling idea, using facts, arguments, analysis, examples, or other information.
- **Conclusion:** the final section; summarizes the connections between the information discussed in the body of the paragraphs and the paragraph’s controlling idea.

The following paragraph illustrates this pattern of organization. In this paragraph both the topic sentence and the concluding sentence (printed in boldface) help the reader keep the paragraph’s main point in mind.

**Coherence**

In a coherent paragraph, each sentence relates clearly to the topic sentence or controlling idea, and there is more to coherence than this. If a paragraph is coherent, each sentence flows smoothly into the next without obvious shifts or jumps. A coherent paragraph also highlights the ties between old and new information to make the structure of ideas or arguments clear to the reader.

Along with the smooth flow of sentences, a paragraph’s coherence may also be related to its length. If you have written a very long paragraph, one that fills a double-spaced typed page, for example, you should check it carefully to see if it contains more than one controlling idea. If it does, you should start a new paragraph where the original paragraph wanders from its controlling idea. If the other hand, if a paragraph is very short (only one or two sentences, perhaps), you may need to develop its controlling idea more thoroughly, or combine it with another paragraph. A number of other techniques that you can use to establish coherence in paragraphs are described below.

**Repeat key words or phrases.**

Particularly in paragraphs in which you define or identify an important idea or theory, be consistent in how you refer to it. This consistency and repetition will bind the paragraph together and help the reader understand your definition or description.

**Create parallel structures.**

Parallel structures are created by constructing two or more phrases or sentences that have the same grammatical structure and use the same parts of speech. By creating parallel structures, you make your sentences clearer and easier to read. In addition, repeating a pattern in a series of consecutive sentences helps your reader see the connections between ideas. In the paragraph above about scientists and the sense of sight, several sentences in the body of the paragraph have been constructed in a parallel way. The parallel structures (which have been underlined) help the reader see that the paragraph is organized as a set of examples of a general statement.

**Be consistent in point of view, verb tense, and number.**

Consistency in point of view, verb tense, and number are subtle but important aspects of coherence. If you shift from the more personal you to the impersonal one, from past to present tense, or from a man to they, for example, you make your paragraph less coherent. Such inconsistencies can also confuse your reader and make your argument more difficult to follow.

**Use transition words or phrases between sentences and between paragraphs.**

Transitional expressions emphasize the relationships between ideas, so they help readers follow your train of thought or see connections that they might otherwise miss or misunderstand. The following paragraph shows how carefully chosen transitions (underlined) lead the
I don’t wish to deny that the flattened, minuscule head of the large-bodied “Stegosaurus” houses little brain from our subjective, top-heavy perspective, but I do wish to assert that we should not expect more of the beast. First of all, large animals have relatively smaller brains than related, small animals. The correlation of brain size with body size among kindred animals (all reptiles, all mammals, for example) is remarkably regular. As we move from small to large animals, from mice to elephants or small lizards to Komodo dragons, brain size increases, but not so fast as body size. In other words, bodies grow faster than brains, and large animals have low ratios of brain weight to body weight. In fact, brains grow only about two-thirds as fast as bodies. Since we have no reason to believe that large animals are consistently stupider than their smaller relatives, we must conclude that large animals require relatively less brain to do as well as smaller animals. If we do not recognize this relationship, we are likely to underestimate the mental power of very large animals, dinosaurs in particular.

Some Useful Transitions
(Modified from Diana Hacker, A Writer’s Reference, 3rd ed.)

To show addition: again, and, also, besides, equally important, first (second, etc.), further, furthermore, in addition, in the first place, moreover, next, too
To give examples: for example, for instance, in fact, specifically, that is, to illustrate
To compare: although, and yet, at the same time, but, despite, even though, however, in contrast, in spite of, nevertheless, on the contrary, on the other hand, still, though, yet
To summarize or conclude: all in all, in conclusion, in other words, in short, in summary, on the whole, that is, therefore, to sum up
To show time: after, afterward, as long as, as soon as, at last, before, during, earlier, finally, formerly, immediately, later, meanwhile, next, since, shortly, subsequently, then, thereafter, until, when, while
To show place or direction: above, below, beyond, close, elsewhere, farther on, here, nearby, opposite, to the left (north, etc.)
To indicate logical relationship: accordingly, as a result, because, consequently, for this reason, hence, if, otherwise, since, so, then, therefore, thus

Paragraphs and Topic Sentences

A paragraph is a series of sentences that are organized and coherent, and are all related to a single topic. Almost every piece of writing you do that is longer than a few sentences should be organized into paragraphs. This is because paragraphs show a reader where the subdivisions of an essay begin and end, and thus help the reader see the organization of the essay and grasp its main points.

Paragraphs can contain many different kinds of information. A paragraph could contain a series of brief examples or a single long illustration of a general point, or it might describe a place, character, or process, narrate a series of events, compare or contrast two or more things, classify items into categories, or describe causes and effects. Regardless of the kind of information they contain, all paragraphs share certain characteristics. One of the most important of these is a topic sentence.

Topic Sentences

A well-organized paragraph supports or develops a single controlling idea, which is expressed in a sentence called the topic sentence. A topic sentence has several important functions: it substantiates or supports an essay’s thesis statement; it unifies the content of a paragraph and directs the order of the sentences; and it advises the reader of the subject to be discussed and how the paragraph will discuss it.
